The AGP SuperSoft Range is extremely special indeed. Using the highest quality European polymers combined with an unrivalled Diamond Shaped Yarn we believe this is one of the softest feeling grasses on the market that doesn't compromise its own resilience. The AGP SuperSoft Spring 30 is a lighter, younger looking lawn so that you can have that spring time garden all year round. Similar to its sister Supersoft Spring 25, this has green thatch stitched within the grass to give you a luscious green look.. There is no need for a sand infill meaning that sand isn't walked into the house, weeds cannot spore on the top and the grass won't get as hot under the sun.
